Technical data

Weight	18,2 kg
thread	M20
Adjustment range	1600 - 4200 mm

A telescopic, 3-part support solution with variable spacer from 1300 to 1970 mm. The combination of interlocking tubular profiles and integrated fine adjustment via a right/left thread allows the length to be quickly adjusted and precisely set.

The galvanised finish protects the surface and allows for use in typical construction site environments.

The required number of wall supports must be determined on a project-specific basis, taking wind loads into account.
