Technical data

Hole Ø 12 mm at top	4
Installation height mm	146 - 211
Bottom plate mm	160 x 100 x 8
M 24 thread at the bottom	65
M 24 thread at the top	65
Bore Ø 13 mm at the bottom	4
Upper plate mm	100 x 100 x 8
Max. characteristic load-bearing capacity in compression/tension for steel	94,2* / 11,8* kN
Max. characteristic load-bearing capacity in compression/tension for timber	170,0 / 50,0 kN

A system for all applications! Stainless steel V4A, a thread of 24 mm and the plate size of 100 x 100 in a 8 mm material thickness - we have the perfect solution for any application. Lift-off and lateral impacts can be counteracted with a straight screw connection into the cross-grained wood using stainless steel fully-threaded 10 x 120 mm wood screws (with European Technical Approval). Of course, post bases of the right/left-threaded system are still height-adjustable when mounted and under heavy load. The use of additional lock nuts increases the rigidity of the connection.
